

Bug Report: Note Assigned to 'Home' Category Displayed Under 'Work' Category

Bug ID:

QA-NOTES-1062

Module:

Notes Management – Category Filtering

Environment:

- **Platform:** [Web]
 - **Environment:** [QA]
 - **Browser:** [.Chrome 125]
 - **OS:** [Windows 11]
 - **User Role:** Standard User
-

Description:

When a user creates a note and assigns it to the “**Home**” category, it is incorrectly **displayed under the “Work” category** section in the main notes view.

The categorization logic appears to be failing either in UI rendering or data filtering. This leads to confusion and mismanagement of notes across personal and professional contexts.

Steps to Reproduce:

1. Log in to the Notes application.
 2. Create a new note and select the “**Home**” category.
 3. Save the note.
 4. Click on the view button of added note
 5. Observe that the note created under “**Home**” is incorrectly listed in “**Work**”.
-

Expected Result:

- Notes should only appear under the category they were assigned to.
 - A note saved in the “**Home**” category should **not** be visible under “**Work**” or any other category unless re-categorized.
-

Actual Result:

- Note assigned to “**Home**” is incorrectly visible in “**Work**” category.
 - Data is either misfiltered or misclassified during retrieval or rendering.
-

Priority:

1– This affects core functionality (categorization) that directly impacts user workflow and experience.

Severity:

2 – Misclassification of data leads to incorrect UI behavior, potential data misuse, and confusion in core note management features.
